

## Princeton Tool Acquires Paragon Precision, Inc

The Princeton Tool team is proud to announce that it has recently completed the acquisition of Paragon Precision Incorporated (PPI) out of Valencia, California. PPI has been a leader in the turbomachinery industry since 1946, and has successfully demonstrated repeatable capability in the fabrication, and precision machining of high-performance, complex-shape, close-tolerance parts from high-strength, high-temperature and corrosion-resistant exotic alloys as well as unscintered ceramic materials.

This union of Princeton Tool & Paragon Precision enhances and complements the products and services currently offered by both companies. It allows Princeton Tool to expand its manufacturing knowledge on rotating components such as blades, vanes, blisks, rotors, nozzles, fans, and impellers. Additionally, Princeton Tool is looking forward to presenting west coast foundries the option of working with a world class supplier in EDM, CNC and waterjet operations locally.

As a team, it has been a goal of ours to expand our geographic locations to support additional foundries across the United States. With this acquisition, we can provide local support to our west coast customers. We see this as a tremendous benefit to our customers, not only will they benefit from a reduction in freight cost, but it will also minimize the total time a product is out of the facility. Simultaneously, this acquisition provides Princeton Tool the opportunity to support the manufacturing of turbomachinery components and assemblies for customers in the Southeast and Midwest in addition to the West coast.

If you would like to learn more about the services we offer, please feel free to reach out to our sales team at [SalesTeam@PrincetonTool.com](mailto:SalesTeam@PrincetonTool.com) or check out the company websites, [www.PrincetonTool.com](http://www.PrincetonTool.com) and <http://paragon-precision.com/>

We look forward to hearing from you soon!
